
Does the CNN look where the mass is? Sensitivity vs reconstructed and excess convergence
A2744 vs κ: ρ = +0.03 (p = 0.723)
A2744 vs excess: ρ = -0.07 (p = 0.345)
Matched simulations vs A2744
with κ held fixed: ρ = -0.10 (p = 0.192)
ρ(κ, excess) = +0.52
A2744 (+0.03)
A2744 shift null, 95%
ΔP(SIDM) when removed
Reconstructed κ S/N (window mean)
Lenstool excess κ S/N (window mean)
Spearman ρ(sensitivity, κ S/N) per cluster
